

**Lady's Mantle**  
*Alchemilla mollis*

Height: 18 inches

Spread: 18 inches

Sunlight: ○ ● ●

Hardiness Zone: 2a

**Ornamental Features**

Lady's Mantle features subtle cymes of chartreuse flowers at the ends of the stems from early to mid summer. The flowers are excellent for cutting. Its crinkled round leaves remain lime green in color throughout the season. The fruit is not ornamentally significant.

**Landscape Attributes**

Lady's Mantle is a dense herbaceous perennial with a mounded form. Its medium texture blends into the garden, but can always be balanced by a couple of finer or coarser plants for an effective composition.

This is a relatively low maintenance plant, and is best cleaned up in early spring before it resumes active growth for the season. Deer don't particularly care for this plant and will usually leave it alone in favor of tastier treats. It has no significant negative characteristics.

Lady's Mantle is recommended for the following landscape applications;

- Mass Planting
- Rock/Alpine Gardens
- Border Edging
- General Garden Use
- Groundcover

### **Planting & Growing**

Lady's Mantle will grow to be about 18 inches tall at maturity, with a spread of 18 inches. Its foliage tends to remain dense right to the ground, not requiring facer plants in front. It grows at a medium rate, and under ideal conditions can be expected to live for approximately 10 years.

This plant performs well in both full sun and full shade. It is very adaptable to both dry and moist locations, and should do just fine under typical garden conditions. It is not particular as to soil type or pH. It is highly tolerant of urban pollution and will even thrive in inner city environments. This species is not originally from North America. It can be propagated by cuttings.
